11+ 30% off

Output

Depending on capacity:

8G USB pen £8.00

16G USB pen £14.00

32G USB pen £22.00

Why Digitalisation Is important?

Generationally we are at a tipping point. As our parents get older we are handed a baton. My father before he passed presented me with a box. Inside the box was a collection of slides and reels of cine film. His and my mothers life encapsulated in film. It also documented the lives of myself and sister. Little snippets, little memories from all over the world (he was a diplomat).

Being a commercial photographer for over 30 years I had invested in technology to digitise my negatives (pre 1990) and then invested in other technologies to be able to digitise tape, film and audio.

The technology that can replay these mediums is disappearing at a rapid rate. The last VHS player was manufactured 2016.

I use my personal experience and knowledge to offer you a great digitisation service that will allow you to preserve and share these great moments.
